Dental Caries Detection Report

Patient Name	Kashif Bhutto	**Patient ID**	PT-2026-4MZU0
Report ID	RPT-VLCGQH1X	**Date of Analysis**	April 30, 2026
Time of Analysis	01:56 PM	**Analyzed File**	1_jpg.rf.03dbafc1a2ffeeaeda27544 81b7e7551.jpg
Generated By	DentalAI AI-Assisted Dental Analysis System	**Average Confidence**	N/A (No cavity detected)

This report is AI-generated and is intended for informational purposes only. It does not constitute a medical diagnosis. Please consult a licensed dental professional for clinical evaluation.

Radiographic Analysis - Annotated Image

Figure 1: AI-detected regions of interest are highlighted. When no cavity is detected, the original image is shown without bounding boxes.

No cavity detections were found in this scan, so no bounding boxes, detection count, or confidence score are shown here.

Clinical Terminology & Findings Explained

Term	Status	Brief Explanation
Dental Caries (Tooth Decay)	Not Indicated	Bacterial destruction of tooth enamel caused by acid produced from sugars. The AI has detected 0 region(s) that may indicate carious lesions.
Enamel	Not Indicated	The hard outer layer of the tooth. Early caries often begins here.
Dentin	Not Indicated	The layer beneath enamel. If caries penetrates here, sensitivity and pain may occur.
Dental Pulp	Not Indicated	The innermost soft tissue of the tooth containing nerves and blood vessels. Deep caries reaching the pulp may require root canal treatment.
Periapical Region	Not Indicated	The area at the root tip. Infection here may appear as a dark shadow on X-rays.
Interproximal Caries	Not Indicated	Decay occurring between teeth, often harder to detect visually.
Occlusal Surface	Not Indicated	The biting surface of the tooth where caries frequently begins in pits and fissures.
Calculus / Tartar	Not Indicated	Hardened plaque deposits that can accelerate decay if present.

Final Verdict

Verdict Level: None

No significant carious regions detected. Routine dental check-ups are recommended every 6 months.

General Dental Health Recommendations

- Brush twice daily with fluoride toothpaste.
- Floss daily to remove interproximal plaque.
- Limit sugary and acidic food and drink intake.
- Schedule professional cleanings every 6 months.
- Drink fluoridated water where available.
- Do not ignore tooth sensitivity - seek early evaluation.
