Dental Caries Detection Report

Patient Name	shah Jahan	**Patient ID**	PT-2026-0958A
Report ID	RPT-RFR8R1XU	**Date of Analysis**	April 21, 2026
Time of Analysis	07:01 AM	**Analyzed File**	1_jpg.rf.03dbafc1a2ffeeaeda2754481b7e7551.j
Generated By	DentalAI AI-Assisted Dental Analysis System	**Average Confidence**	99.6% (High)

This report is AI-generated and is intended for informational purposes only. It does not constitute a medical diagnosis. Please consult a licensed dental professional for clinical evaluation.

Radiographic Analysis - Annotated Image

Figure 1: AI-detected regions of interest are highlighted. Each box corresponds to a suspected area of concern.

Detection #	Region Coordinates	Confidence Score	Severity Level
-	No suspicious coordinates detected	0.0%	Low Concern / Monitor

Clinical Terminology & Findings Explained

Term	Status	Brief Explanation
Dental Caries (Tooth Decay)	Detected / Possibly Affected	Bacterial destruction of tooth enamel caused by acid produced from sugars
Enamel	Detected / Possibly Affected	The hard outer layer of the tooth. Early caries often begins here.
Dentin	Detected / Possibly Affected	The layer beneath enamel. If caries penetrates here, sensitivity and pain m
Dental Pulp	Detected / Possibly Affected	The innermost soft tissue of the tooth containing nerves and blood vessels.
Periapical Region	Not Indicated	The area at the root tip. Infection here may appear as a dark shadow on X-
Interproximal Caries	Detected / Possibly Affected	Decay occurring between teeth, often harder to detect visually.
Occlusal Surface	Detected / Possibly Affected	The biting surface of the tooth where caries frequently begins in pits and fis
Calculus / Tartar	Detected / Possibly Affected	Hardened plaque deposits that can accelerate decay if present.

Final Verdict

Verdict Level: Significant

Multiple regions of concern detected. Prompt consultation with a licensed dentist is strongly recommended for clinical examination and appropriate treatment planning.

General Dental Health Recommendations

- Brush twice daily with fluoride toothpaste.
- Floss daily to remove interproximal plaque.
- Limit sugary and acidic food and drink intake.
- Schedule professional cleanings every 6 months.
- Drink fluoridated water where available.
- Do not ignore tooth sensitivity - seek early evaluation.
